Priveria

A DPIA Framework-as-a-Service for AI and agentic systems

THE PROBLEM

Privacy risk doesn't stay still, but most DPIAs do. Assessments are signed once and rarely revisited, even as AI models and vendors keep changing — leaving teams scattered across tools that each score "high risk" differently.

HOW PRIVERIA HELPS

Priveria turns the DPIA into a living object that re-evaluates as systems change, speaks one risk vocabulary across teams, and exports regulator-ready evidence on demand.

Streamlined DPIAs Guided wizard, multi-risk register.	Compliance Dashboard Risk visibility and threat register, side by side.	Threat Modeling for AI STRIDE, LINDDUN, and MITRE ATLAS, one register.
AI Module Systems tiered by EU AI Act risk.	Policy-as-Code Compiles to enforceable Rego or TS.	Board-Ready Reporting Five templates, regulator to board brief.

Compliance Dashboard

Risk visibility and the threat register in one view — every threat tied to an owner, a control, and a re-trigger condition.

DPO COMMENTS & APPROVAL

Mitigations proportionate to residual exposure. Approved pending quarterly re-review.

M. Chen, DPO · Jul 21, 2026

Approve

Request Changes

RESIDUAL RISK DISPOSITION

Prompt injection → data exfiltration

Residual risk falls within the organization's accepted risk appetite (below 40) once input sanitization and rate limiting are enforced. Recommend acceptance with continuous monitoring rather than further mitigation.

COMMENT — J. OKAFOR, PRIVACY LEAD

Rate limiting confirmed live in staging; monitoring dashboard configured. Concur with acceptance, revisit at next model version.

■ GET INVOLVED

Help shape where Priveria goes next

Priveria is built in the open, by practitioners. If you lead privacy, security, or risk at your organization, we'd welcome your perspective on where the workflow holds up — and where it doesn't.

01

Pilot it internally

Run Priveria against a real DPIA backlog and share what worked — and what didn't.

02

Join the Slack community

Trade notes on scoring models, governance patterns, and roadmap priorities.

03

File issues & feedback

Tell us where the workflow breaks down for your team, in your environment.
